

The right attachment for your car.

For best safety results, follow the recommended attachments based on the weight of your dog.

Weight	Latch Bar	Seat Belt Adapter	Harness Loop
10-60 lbs.	X	X	X
10-120 lbs.		X	X
10-200 lbs.			X

[The harness loop provides the strongest securement.]

Option 1-Latch Equipped Vehicle.

(Latch equipped vehicles have at least two sets of small bars, called anchors, located in the back seat where the cushions meet. Latch is required on vehicles manufactured after September 1, 2002. See vehicle owner's manual for additional information.)

Latch option is only for dogs from 10 to 60 pounds. Using the Kwik-Connect Tether, attach the snap hook to the metal ring of the harness and the connector onto the anchors. Listen for a click as the connector latches to the anchor and pull to make sure the connector is locked in place. For added safety, it is recommended that the tether be adjusted to the shortest length comfortable for the dog.

Option 2-Seat Belt Adapter

Seat Belt Adapter is for dogs 10 to 120 pounds. Slip seat belt through the Seat Belt Adapter loop and buckle the seat belt. The Kwik-Connect Tether can now be attached to the metal ring on the adapter.

Option 3-Use Vehicle Seat Belt

Seat belt can be used for dogs 10 to 200 pounds. Slip the vehicle's seat belt through the loop of the harness on the dogs back and buckle the seat belt.
